

SPACE.THEORY

FOR

THE *Highline*  
RESIDENCES

Space Theory kitchens offer a uniquely innovative approach to the most important room in the home.

Premium quality and intuitive functionality, woven directly into the product, elevate the experience of the kitchen.

Our team of expert designers developed the highly functional layouts specifically for the Highline Residences.

All Space Theory products are made by hand in Seattle, using premium domestic materials, and built to last.

With a Space Theory kitchen, the tools you need to create the space you want are designed as part of the system. Stainless steel and wood drawer components are designed to fit neatly in a flexible way into the soft close drawers. The drawer interiors are designed as carefully as the rest of the system.

Cabinets are made from  $\frac{3}{4}$ " veneer core domestic plywood, constructed by hand, doweled, glued and screwed.

The result is a structural cabinet that is very strong, and easy to install. Even the backs are  $\frac{3}{4}$ " plywood.

Base and tall units come with levelers installed and connector bolt fittings for joining them together, which helps assure a quality installation.

All drawers use the highest quality soft close hardware, with powdercoated steel sides and 5/8" thick lined plywood bottoms – which makes them strong and durable.

Our finish is 2k Polyurethane, which is a finish primarily used in Europe and in other industries like aviation. It is extremely heat and chemical resistant, while also allowing a natural feel – without filling the grain of the wood.

The tools you need to create the organization you want are designed into the system. Our wood and stainless steel drawer organization is designed to be modular to keep your utensils neat in a flexible way. Designed on a grid, you can change the layout to your own taste. They are also usable outside the drawers for serving or storage.

Cleaning is a cinch. Simply lift out the silicone liner and throw the stainless bins and mats in the dishwasher. The bins are made from the offcuts of our sinks making them super durable and while reducing waste.
